

## U.S. Army Selects IBM for the Third Time to Provide Full Portfolio of IT Management Services

**WASHINGTON, D.C. - FEB. 10, 2021** - Today, IBM (NYSE: [IBM](#)) announced the renewal of a contract with the U.S. Army to continue providing a full portfolio of IT management services to the U.S. Army Materiel Command Logistics Data Analysis Center (LDAC). Under this LITeS III contract, IBM will continue to serve one of the largest logistics systems in the U.S. federal government and expand upon the software development and cognitive computing capabilities provided in previous LITeS I & LITeS II contracts, also awarded to IBM.

During the next five years, IBM will work to enhance the U.S. Army IT readiness and resilience by providing LDAC with a series of IT management services that include cloud migration support; analytics; software development and sustainment; database management and analysis; application integration and management; customer support; business case analysis; enterprise design, integration, and consolidation; cybersecurity; product end-user guides and project management.

“This third contract awarded to IBM in the LITeS series confirms IBM’s positioning to serve the U.S. Army’s critical IT programs,” **said Steve LaFleche, IBM’s General Manager, U.S. Public and Federal Market**. “We are proud to continue our collaboration with LDAC and to provide them with the high quality, efficiency and effective support they require to further their digital modernization journey.”

IBM’s work with LDAC (formerly Logistics Support Activity, LOGSA) started in 2012 with the LITeS I contract that focused on modernizing LDAC’s legacy data center into an on-premise hybrid cloud managed services delivery model; implementing strong cybersecurity controls and transitioning the organization to an Agile delivery organization. The second contract, LITeS II in 2017, transitioned LDAC to a platform as a service delivery model, allowing inter-agency data sharing and implementing initial analytics capabilities.

Under LITeS III, in addition to continuing to provide IT portfolio management and analytics services as part of this new contract, IBM will help LDAC focus on:

- Continuing their strategic transformation to becoming the premier analytics organization of Army Materiel Command;
- Maximizing the value of their migration to cloud environment by completing the implementation of DevSecOps in the cloud; and
- Leveraging [IBM’s Garage](#) based in Huntsville, AL to rapidly prototype and transition new capabilities to a full delivery model to help bring value to the Army more quickly, to include automation, software delivery, and analytics modeling.

### About LDAC

LDAC provides on-time integrated logistics support of worldwide U.S. Army operations, and is responsible for the Army’s master data, supporting strategic and operational decision making with large data sets to generate decision support. To learn more about LDAC visit <https://www.logsa.army.mil/>

### About IBM

IBM is the global leader in business transformation, serving clients in more than 170 countries around the world.
