

Hapag-Lloyd and Ocean Network Express Complete TradeLens Integration, Join Rapidly Expanding Shipping Ecosystem to Further Enhance Trade Digitization

The TradeLens ecosystem now includes more than 300 organizations - encompassing ten ocean carriers and data from more than 600 ports and terminals.

COPENHAGEN, Denmark and ARMONK, N.Y., June 24, 2021 /[PRNewswire](#)/ -- Hapag-Lloyd and Singapore-based Ocean Network Express (ONE) Pte. Ltd. today announced they have completed integration onto the TradeLens platform, helping ensure a more timely and consistent view of logistics data for their containerized freight around the world. TradeLens is a neutral, third-party platform launched by IBM (NYSE:[IBM](#)) and A.P. Moller - Maersk ([MAERSKb.CO](#)) to help modernize the world's supply chain ecosystems and is run on [IBM Cloud](#) and [IBM Blockchain](#).

Since the completion of multiple pilot projects as well as the integration, Hapag-Lloyd and ONE, the world's fifth and sixth largest carriers respectively, are now working to help their clients and business partners across all major geographies benefit from TradeLens' ability to increase efficiency and improve access to information. They join foundation carriers A.P. Moller - Maersk, as well as [CMA CGM](#) and [MSC Mediterranean Shipping Company](#) (MSC) which both completed their pilots and integration in October 2020, and five other carriers already inputting shipping data into the TradeLens platform.

Additionally, TradeLens continues to rapidly on-board new organizations from across the shipping industry, recently adding shippers and importers including Van den Ban Tires which use the platform to address back office inefficiencies and improve the visibility of cargo. Recently, KLog.co also became the first freight forwarder in Latin America to join TradeLens to improve efficiency, decrease operational costs and advance KLog.co's goal of opening up international trade to all companies in the region, no matter the size of the business.

"TradeLens technology holds great potential to help enable the digitization of supply chain processes and documentation handling," said Rolf Habben Jansen, CEO of Hapag-Lloyd. "Our customers will clearly benefit from increased transparency, accuracy, speed and efficiency in their supply chains - leading to reduced cost."

The TradeLens ecosystem now includes more than 300 organizations – encompassing ten ocean carriers and data from more than 600 ports and terminals. TradeLens has already processed 42 million container shipments, nearly 2.2 billion events and some 20 million documents. In total, five of the top six global shipping carriers are now integrated onto the platform contributing to the digitization of documentation and automated workflows.

"We believe TradeLens can bring together all parties in the supply chain to the digital ecosystem where customers can get seamless, transparent and secure sharing of shipping milestones and trade documents. With its open standards and open governance, it can benefit our customers and the entire industry to drive for digitalization and automation," said Jeremy Nixon, CEO of Ocean Network Express.

TradeLens offers shippers and freight forwarders direct, permissioned access to digitized, multi-carrier visibility and documentation processes through a single platform, reducing the need for paper-based processes and giving participants in global trade a single, up-to-date picture of the flow of their goods.

Through the TradeLens platform, network participants can easily connect their key supply chain partners to the digital platform as well, allowing data and documents to be published and consumed more quickly and only among permissioned parties.

"A huge barrier to global trade has long been the inability for customers to securely share crucial information regarding the status of goods in an easily accessible and transparent way," said Mike White, CEO GTD Solutions and Head of TradeLens. "By addressing this problem, the TradeLens ecosystem has grown rapidly, and the onboarding of Hapag-Lloyd and ONE along with their customers helps extend the value of TradeLens across the entire TradeLens ecosystem, enabling connectivity to two-thirds of global containerized freight for all customers and other permissioned parties through a single platform. All participants benefit from reduced manual processes, while also streamlining processes from automation and improved forecasting."

About Hapag Lloyd

With a fleet of 241 modern container ships and a total transport capacity of 1.7 million TEU, Hapag-Lloyd is one of the world's leading liner shipping companies. The Company has around 13,300 employees and 395 offices in 131 countries. Hapag-Lloyd has a container capacity of approximately 2.8 million TEU – including one of the largest and most modern fleets of reefer containers. A total of 121 liner services worldwide ensure fast and reliable connections between more than 600 ports on all the continents. Hapag-Lloyd is one of the leading operators in the Transatlantic, Middle East, Latin America and Intra-America trades.

About Ocean Network Express (ONE)

Ocean Network Express (ONE) was incepted on July 7, 2017 following the liner service integrations of Kawasaki Kisen Kaisha ("K" LINE), Mitsui O.S.K. Lines (MOL) and Nippon Yusen Kaisha (NYK). The new entity functions from its global headquarters in Singapore, supported by regional headquarters in Hong Kong, Singapore, the United Kingdom, the United States and Brazil. ONE is the world's sixth largest container carrier with a fleet size of approximately 1.55 million TEU. Operating more than 210 vessels, it offers an expeditious and a reliable international network of over 120 services to 120 countries and beyond. ONE is a member of THE Alliance (THEA), a global ocean carrier consortium.
